SECTION I
INTRODUCTION

1. SCOPE.

This manual contains a list of repair parts required for the performance of direct support, general support, and depot maintenance for Electronic Equipment Configuration Army Model RU-21D Aircraft, Reconnaissance, Utility.

2. GENERAL.

The repair parts list is divided into the following sections:

a. Repair Parts List - Section II. This chart lists repair parts authorized for maintenance performance at direct support, general support, and depot levels.

b. Special Tools, Test, And Support Equipment List - Section III. Not Applicable.

c. Federal Stock Number Index - Section IV. An index of Federal stock numbers in ascending numerical sequence followed by a list of reference numbers in ascending alpha-numeric sequence, cross-referenced to the illustrations by item number.

d. Figure and Item Number Cross Reference to Index-number Index-Section V. An index of illustrated items to line items by index numbers. The line item index numbers appear in the SMR code column directly under the code letters for each item. The index number for an item will be the same for that item in all repair parts lists for this equipment. Index numbers will appear in ascending sequence, but the sequence may not be continuous for all items.

e. Reference Designation Cross Reference to Index-number Index-Section VI. An index of reference designators in ascending alpha-numeric sequence, cross-referenced to the index number.

3. EXPLANATION OF COLUMNS.

An explanation of the columns is given below.

a. Source, Maintenance and Recoverability Codes (SMR) Column 1. This column lists the applicable SMR codes and an index number. The index number is related to automatic data processing in supply functions, but may also be used as a locator for the line item, when reference designations are not in alpha-numerical sequence. The SMR codes used in this list are:

(1) Source code. The selection status and source for the listed item is noted here. Source codes and their explanations are as follows:

CODE	EXPLANATION
P	Applies to repair parts that are stocked in or supplied from the GSA/DSA, or Army supply system, and authorized for use at indicated maintenance categories.
M	Repair parts which are not procured or stocked, but are to be manufactured in indicated maintenance levels.
A	Assemblies which are not procured or stocked as such, but are made up of two or more units. Such component units carry individual stock numbers and descriptions, are procured and stocked separately, and can be assembled to form the required assembly at indicated maintenance categories.
X	Applies to parts and assemblies which are not procured or stocked; the mortality of which normally is below that of the applicable end item; and the failure of which should result in retirement of the end item from the supply system.
X1	Applies to repair parts which are not procured or stocked, the requirement for which will be supplied by use of next higher assembly or component.
X2	Applies to repair parts which are not stocked. The indicated maintenance category requiring such repair parts will attempt to obtain such parts through cannibalization. If they are not obtainable through cannibalization, such repair parts will be requisitioned with supporting justification through normal supply channels.
C	Applies to repair parts authorized for local procurement. If such parts are not obtainable from local procurement, they will be requisitioned through normal supply channels with a supporting statement of nonavailability from local procurement.

G Applies to major assemblies that are procured with PEMA funds for initial issue only to be used as exchange assemblies at DSU and GSU level. These assemblies will not be stocked above DSU and GSU level or returned to depot supply level.

(2) Maintenance code. The maintenance code indicates the lowest category of maintenance authorized to install the listed item. The codes are:

CODE	EXPLANATION
C	Operator/crew
O	Organizational maintenance
F	Direct support maintenance
H	General support maintenance
D	Depot maintenance

(3) Recoverability code, indicates whether unserviceable items should be returned for recovery or salvage. Repair parts and assemblies not assigned a recoverability code shall be considered expendable. The codes are:

CODE	EXPLANATION
R	Applies to repair parts and assemblies which are economically reparable at DSU and GSU activities and normally are furnished by supply on an exchange basis.
T	Applies to high dollar value recoverable repair parts which are subject to special handling and are issued on an exchange basis. Such repair parts normally are repaired or overhauled at depot maintenance activities.
U	Applies to repair parts specifically selected for salvage by reclamation unit because of precious metal content, critical materials, high dollar value reusable casings or castings.

b. Federal Stock Number, Column 2. This column indicates the Federal stock number assigned to the item and will be used for requisitioning purposes.

c. Description, Column 3. This column includes the Federal item name and any additional description of the item required, the manufacturer's part number (reference number) and the applicable five-digit Federal Supply Code for Manufacturers (para 7). When an item is repeated several times in the list, only the first appearance carries the description. For subsequent appearances of the item, the description column will read "Same as", followed by the index number of the first appearance; for example, RESISTOR, FIXED, COMPOSITION: SAME AS 298. Usable on code column is not used.

d. Unit of Measure, Column 4. The unit used as a basis of measure (e.g., ea, pr, ft, yd, etc.) is indicated in this column.

e. Quantity Incorporated in Unit, Column 5. The quantity of repair parts in an assembly is given in this column. The alphabetic symbol "REF" appearing in this column, in lieu of a quantity, indicates that the item is a duplicate of an item listed previously and the required quantity per assembly is shown with the first listing.

f. Maintenance Allowances Columns 6 and 7.

(1) The allowance columns are divided into subcolumns. The total quantity of items authorized for the number of equipments supported is indicated in each subcolumn opposite the first appearance of each item. Subsequent appearances of the same item will have no entry in the allowance columns but will have a reference, in the description column, to the first appearance of the item. Items authorized for use as required but not for initial stockage are identified with an asterisk (*) in the allowance column.

(2) The quantitative allowances for DS/GS levels of maintnenace will represent initial stockage for a 30-day period for the number of equipments supported.

g. One-Year Allowances Per 100 Equipments/Contingency Planning Purposes, Column 8. Opposite the first appearance of each item, the total quantity required for distribution and contingency planning purposes is indicated. The range of items indicates total quantities of all authorized items required to provide for adequate support of 100 equipments for one year.

h. Depot Maintenance Allowance Per 100 Equipments, Column 9. This column indicates the total quantity of each item authorized depot maintnenace for 100 equipments. Subsequent appearances of the same item will have no entry in this column, but will have a reference in the description column to the first appearance of the item.

i. Illustrations, Column 10.

(1) Figure number, column 10A. The number of the illustration in which the item is shown is indicated in this column.

(2) Item No. or reference designation, column 10B. The callout number or reference designation used to reference the item in the illustration appears in this column.

4. SPECIAL INFORMATION.

The following publications pertain to Electronic Equipment Configuration Army Model RU-21D, Aircraft, Reconnaissance, Utility and its components.

TM 11-5831-201-20P Organizational Maintenance Repair Parts List: Control, Intercommunication Set C-1611D/AIC

TM 11-6125-240-25P * Organizational, DS, GS, and Depot Maintenance Repair Parts and Special Tool Lists: Motor Generator PU-545/A
TM 11-7125-220-35P DS, GS, and Depot Maintenance Repair Parts and Special Tool Lists: Motor-Generator PU-543/A, PU-543A/A, and PU-543B/A

5. HOW TO LOCATE REPAIR PARTS.

a. To find a repair part in the list when the reference designation is known, using the figure and reference designation cross reference index to index numbers (Section V) locate the figure and item number; note the index number, then locate the item in the list by index number.

b. To find a repair part in the list when the reference designation is known, using the reference designation cross reference index to index numbers (Section VI) locate the figure and item number; note the index number, then locate the item in the list by index number

c. To find a repair part in the list when the Federal stock number (FSN) is known, locate the FSN in the FSN index. Note the index number; then, find the index number in the parts list.

6. FEDERAL SUPPLY CODES.

This paragraph lists the Federal supply codes and the associated manufacturer's name.

7. REPORTING OF EQUIPMENT MANUAL IMPROVEMENTS.

Reporting of errors, omissions, and recommendations for improving this manual by the individual user is encouraged. Reports should be submitted on DA Form 2028 (Recommended Changes to Publications) and forwarded direct to Commanding General, U. S. Army Electronics Command, ATTN: AMSEL-ME-NMP-AD, Fort Monmouth, N. J., 07703.
